DizBalanser

Portfolio

- AI and Data Engineer specializing in Python, LLM integrations, and scalable RAG architectures. Demonstrated success in accelerating data processing by up to 40% and deploying FastAPI backends to optimize complex enterprise workflows. Bringing hands-on technical expertise in machine learning applications and automated data pipelines.

Education

Eötvös Loránd University (ELTE)

Bachelor of Science in Computer Science (Stipendium Hungaricum Scholar, Top 5%)

September 2023 – Present

Budapest, Hungary

Experience

AI Automation Engineer

Modifai Labs

June 2026 – Present

Project based - Remote

- Engineered and deployed 5+ automated AI-driven workflows to streamline enterprise sales processes, increasing overall team operational efficiency by 30%.
- Integrated advanced LLM APIs to process and classify unstructured business data, reducing manual lead qualification time by over 40%.

Python Intern

EPAM Lab

May 2026 – Present

Remote

- Completed a rigorous 12-week enterprise software engineering program focused on scalable Python development and microservices architecture.
- Applied industry best practices in clean code and unit testing, achieving 90%+ test coverage across assigned collaborative modules.

Automation & Backend Developer

ToiWare

November 2025 – June 2026

Remote

- Architected scalable API pipelines integrating Webhooks, Make.com, and Airtable, saving the team 15+ hours of manual data entry per week.
- Developed robust Python ETL scripts featuring multi-key deduplication and anomaly detection, reducing data formatting errors by 35%.

Visual Data Engineer

Manevision

June 2025 – December 2025

Remote

- Automated extensive data cleaning and preprocessing pipelines using Python, successfully structuring 5000+ visual data samples for downstream ML training.
- Optimized Python scripts to handle large metadata files, decreasing data processing execution time by 25% and ensuring 99% dataset consistency.

AI & Engineering Projects

ClearMind (RAG System & Digital Twin)

Python | RAG | FastAPI | React

- Architected a scalable digital twin assistant for productivity automation, integrating the Gemini API to handle 100+ daily natural language queries.
- Built a fast Retrieval-Augmented Generation (RAG) backend utilizing FastAPI, reducing document context retrieval latency by 30%.

Hackathons (GDE MIT & LauzHack)

Azure OpenAI | Python | Data Analytics

- **GDE MIT:** Engineered an AI solution leveraging Azure OpenAI, managing complex context windows and optimizing API payload sizes to stay within strict token limits.
- **LauzHack (UBS):** Built an anomaly detection system under a 24-hour deadline, analyzing and filtering 10,000+ rows of financial data.

Technical Skills

- **Programming Languages:** Python, Java, SQL (PostgreSQL, MySQL), JavaScript, Bash.
- **AI, ML & Data:** LLM Integration (OpenAI, Gemini), RAG Architectures, Prompt Engineering, ETL Pipelines, Exploratory Data Analysis (EDA), Pandas, NumPy, Vector Databases.
- **Backend & Cloud:** RESTful APIs, FastAPI, Microservices Architecture, AWS (EC2), Azure OpenAI, Webhooks.
- **Tools & Infrastructure:** Git/GitHub, Linux (Ubuntu), Docker, Jupyter Notebooks, Agile/Scrum.
- **Languages:** English (Fluent), Kyrgyz (Native), Russian (Native), Hungarian (Beginner).
